

[illegible]

5 ELIN/callback number from an emergency caller calling  
from behind a PBX/MLTS include prioritizing the emergency  
call, assigning a port equipment number to each  
device/trunk of the PBX/MLTS and associating  
ports/devices with ELINs and callback numbers. The  
10 apparatus of the invention detects an emergency number,  
assigns the call priority, and uses the port/device  
number to determine the ELIN/callback number and properly  
transmit the ELIN/callback number.
